Dynextron Services

PUBLIC ANNOUNCEMENT: DEPLOYMENT OF ENTERPRISE DIGITAL NOTICE PORTAL

Official Statutory Repository for Corporate Disclosures and Fiduciary Declarations

Effective Date: November 7, 2026

Corporate Jurisdiction: Varanasi, Uttar Pradesh, India

Document ID: DYSIL-2026-008

1. Establishment of the Unified Digital Repository

In unwavering alignment with our mandates for absolute corporate transparency, algorithmic governance, and statutory compliance, Dynextron Services India Limited announces the immediate deployment and operationalization of the Enterprise Digital Notice Portal. Hosted natively on our primary domain (dynextron.in/notices), this centralized cryptographic repository shall hereafter serve as the exclusive, legally recognized bulletin for all corporate declarations, financial disclosures, intellectual property assignments, and fiduciary updates pertaining to the holding entity and its subsidiaries.

2. Architectural Integrity and Cryptographic Immutability

Engineered by our core backend operations team, the Digital Notice Portal completely bypasses legacy, highly vulnerable content management systems (CMS). The portal is deployed utilizing a statically generated, serverless edge-computing architecture routed exclusively through Cloudflare's Enterprise Tier.

To ensure the absolute legal validity and tamper-evident nature of our public disclosures, all notices published on this portal are cryptographically hashed and stored within our TiDB Serverless clusters. This zero-trust, immutable ledgering ensures that once a statutory notice—such as a DPDP Act compliance update, a structural M&A declaration, or a shareholder grievance resolution—is digitally published, its timestamp and content cannot be retroactively altered, manipulated, or subjected to unauthorized internal revisions.

3. Statutory Validity and Regulatory Compliance

This digital portal satisfies all public disclosure requirements mandated under the Companies Act, 2013, the Information Technology Act, 2000, and the Digital Personal Data Protection (DPDP) Act, 2023. Effective immediately, the publication of any corporate mandate, privacy policy revision, or capital restructuring notice on this portal shall constitute formal and absolute legal notification to all institutional investors, active B2B clientele, vendors, and regulatory oversight authorities.

All stakeholders are formally advised to monitor this portal for binding updates regarding the ongoing integration of Dynextron Internet Services, the rollout of our IoT hardware prototypes, and our scheduled financial audit reconciliations.

CERTIFICATE OF TECHNICAL DEPLOYMENT AND ARCHITECTURAL ENDORSEMENT

This is to formally certify that the Enterprise Digital Notice Portal has been fully architected, rigorously load-tested, and successfully deployed onto the production environment of Dynextron Services India Limited.

I hereby attest that the underlying serverless infrastructure, the edge-level DNS routing protocols, and the cryptographic immutability measures governing this portal meet the highest standards of enterprise cybersecurity. The system is structurally fortified against volumetric DDoS attacks, zero-day vulnerabilities, and unauthorized data injection, ensuring 99.99% high-availability for all critical fiduciary disclosures.
